

COOPERATIVE ECONOMIC INSECT SURVEY REPORT  
Glenn A. Salsbury, Survey Entomologist

Report 1, Volume 54  
14 February, 2006

GREENBUGS: Less than one per row foot were found in one field in Pratt County.

BIRD CHERRY-OAT APHID: While most are dead a few live ones can still be found in the heavier wheat.

ALFALFA WEEVIL: First instar larvae were common in one field checked in Pratt County. Most of the terminals were showing a small amount of feeding. About one-third of the larvae found were dead.

CLOVER LEAF WEEVIL: Light numbers of larvae have been noted in some fields. No significant damage has been found. The hatch should be complete.

ARMY CUTWORM: One spot in one field was found to have 1-2 larvae per crown. Most counts have been well below the economic threshold.
